

QUAD AND STEREO BROADCASTING

The Quad Multiplex Decoder is designed for use with the Quad FM Tuner, to handle stereo broadcasts without affecting mono radio reproduction. Its electronic switching is so arranged that pressing the stereo button on the Quad 22 control Unit automatically mutes all mono signals and permits only stereo signals to be reproduced, thus obviating the inconvenience of special mono/stereo indicators.

For the majority of British listeners, this can be only of academic interest. We feel sure, however, they will understand the very lively interest of those fortunate enough to be within the range of Wrotham, or more especially, the many European Stereo Broadcasts.

Stereo radio properly handled is a vital step towards
The closest approach to the original sound
