

BOOTHROYD/STUART MERIDIAN 104 FM TUNER

Designed to match and compliment the 101 preamplifier both visually and sonically, the 104 is a high performance limited facility FM Tuner.

Six preset stations (1-6) and one standby position (0) are selected by the rotary switch. (Tuning of each station is achieved by inserting a screwdriver provided into the corresponding hole in the panel beneath the meter scale). There is a power on/off switch on the rear of the product. Other controls are a combined mono + mute switch and a tune switch which disables the AFC and converts the meter from frequency indication to centre tuning for accurate alignment.

Emphasis has been placed on foolproof operation maintaining very low levels of noise, distortion and intermodulation distortions. The radio circuit combines a dual gate MOSFET input stage with a double band mixer for low intermodulation, a linear phase IF for low distortion and an advanced stereo decoder with pilot tone cancel circuitry.

Please complete and return the following slip to your Dealer of Distributor. This will ensure you receive a full copy of the Boothroyd/Stuart Meridian 104 instruction book which is now being prepared.

BOOTHROYD STUART/MERIDIAN 104 FM TUNER
